

ORIGYN

Traceability Accessibility Certification

ORIGYN protects your most valuable assets

Technology has accelerated the pace of modern life, complicating the task of establishing trust in an environment filled with uncertainty, whether it's in people, companies, or even physical objects. To address this issue, the world needs a public, open-source, and decentralized registry like ORIGYN.

ORIGYN is a decentralized protocol launched by the ORIGYN Foundation. The protocol defines the rules and procedures that govern the entire project. The mission of the protocol is to trace and to protect the most valuable assets over time by using advanced certification technologies.
